Job ad: Software Engineer – Ruby on Rails Developer

We are looking for a full-stack developer to manage a web application with a very big traffic. Our social P2P platform, HelperChoice, was created in 2012 and since 2015 we have been using Ruby on Rails.

You would be in charge of designing and implementing new features as well as maintaining and monitoring the existing platform:

- Develop and maintain efficient, reusable and reliable Ruby code
- Integrate data storage solutions (eg PostgreSQL, Redis)
- Help to maintain code quality and organisation
- Implement new features in collaboration with our Country Manager
- Monitor performances and bugs in order to guarantee a unique experience to our users
- Implement automated testing platforms and unit tests

Requirements (but we can also be flexible):

- 4+ years solid professional coding experience in Ruby on Rails
- Experience designing and building web applications (Front-end and Back-end)
- Experience with object-oriented design
- Skills in MySQL, PostgreSQL, or other relational databases
- Experience with agile development methodologies
- Experience with Linux and supporting application in a Linux environment
- Fluent in English
- Based in Hong Kong

About our company:

HelperChoice creates a win-win situation for both employers and domestic workers by designing a specialised marketplace where everyone can interact and find the perfect match. HelperChoice is ranked #4 in the list of start-ups in Hong Kong according to Start-up ranking. We gained international awards like the HK Edition of the Woman Entrepreneur of the Year Award, the Impact2 competition, Get in the Ring…

If you want to discuss about this opportunity or if you have questions, feel free to contact Julie DELIGNON: julie@helperchoice.com.
